

# CASE STUDY:

# NATIONAL CONVENIENCE STORE

LOCATION: NEWPORT, NEW HAMPSHIRE

## SITUATION:

The customer had an aging EPDM roof that was installed incorrectly and as a result, was rapidly deteriorating. The previous roofing provider did not rust strip the surface, which caused the membrane to pull and develop severe wrinkles.

 4,160 sq. ft.

 SR 454 MA

 SAM (Self Adhered Modified) sheet with Wite Brite™ and Poly

AFTER

## SOLUTION:

Simon Roofing identified the cause of the issue with a comprehensive SR PreVision inspection and analysis. After cutting, stretching and re-fastening the old EPDM membrane to remove the wrinkles, we installed our SAM (self-adhered modified) system over the existing membrane. Our unique process of liquid-applying Wite Brite™ and embedding Poly within the Wite Brite™ layers resulted in a watertight roof with a new, full 15-year warranty.
